

The power of STEM magic

An international reading and experimenting project for kids

Most children's books are full of STEM themes: plants, animals, numbers, shapes, and more. Clearly, natural and technological phenomena can be explained in story time sessions and experienced through simple experiments. Learning about science and technology is an excellent way to improve language and reading skills, especially for kids in preschool and elementary school.

Volunteer readers transport kids from many European countries to a magical world and get them interested in STEM subjects.

PROJECT START
2015

CHILDREN'S AGE
3 to 10 years

EVENT LOCATIONS
> 500 libraries, schools and day-care centers

VOLUNTEER READERS
2,630

Project website: www.telekom-stiftung.de/volunteer-readers

Our service for you

Want to provide STEM reading activities, too? Then download our checklist today. Just scan the QR code!
